# 40

Attach the floor panel to both sides

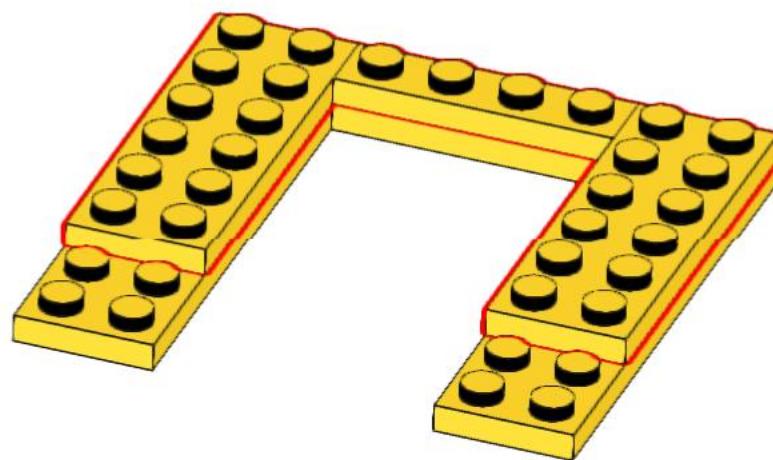

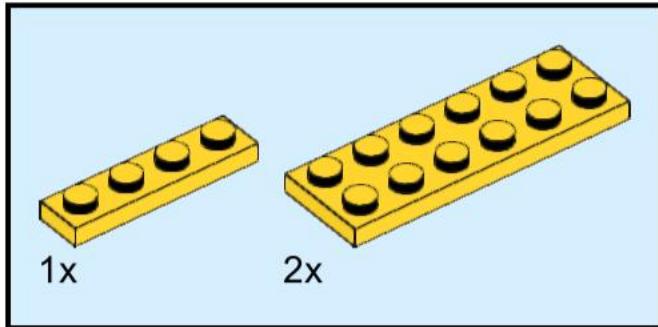

# 41

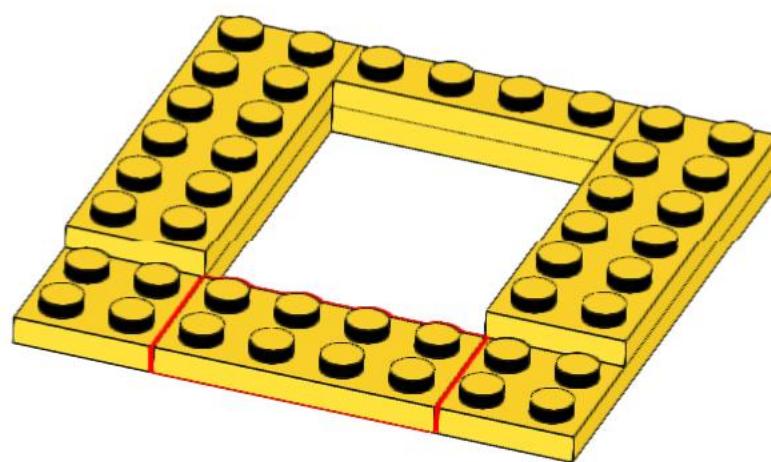

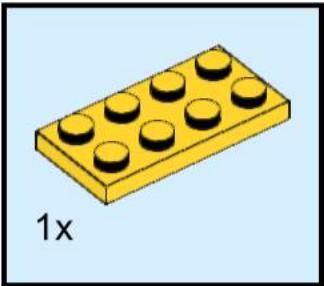

These can be any color, black works best. Also these are not connected in this submodel but they go straight onto the body.

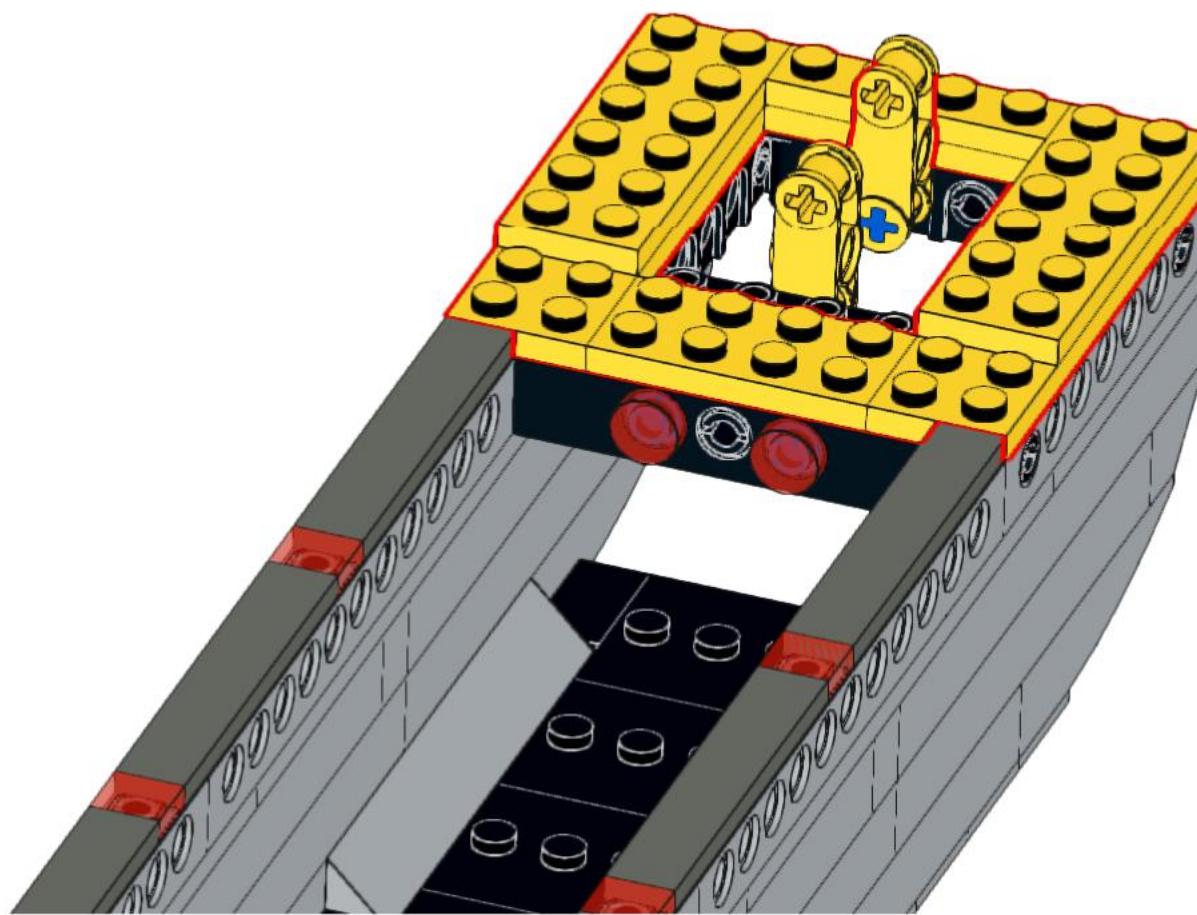

**42**

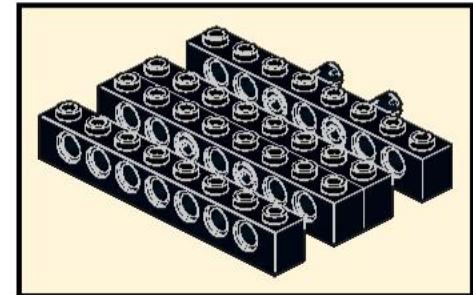

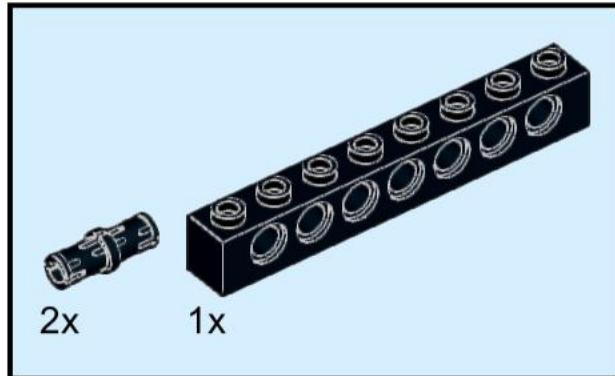

**43**

**48**

# 49

This submodel is also not connected to itself, it goes on top of the previous one.

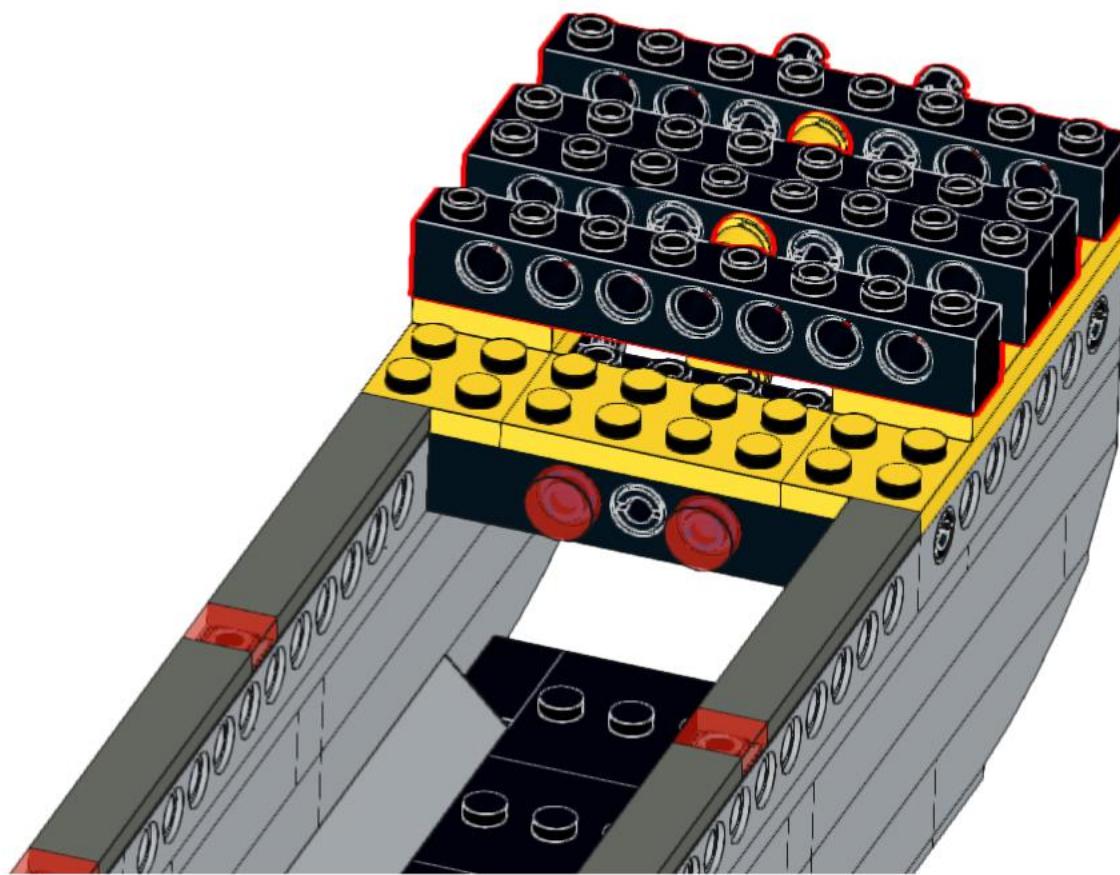

# 50

Insert the grey axle after you put  
this submodel on the body

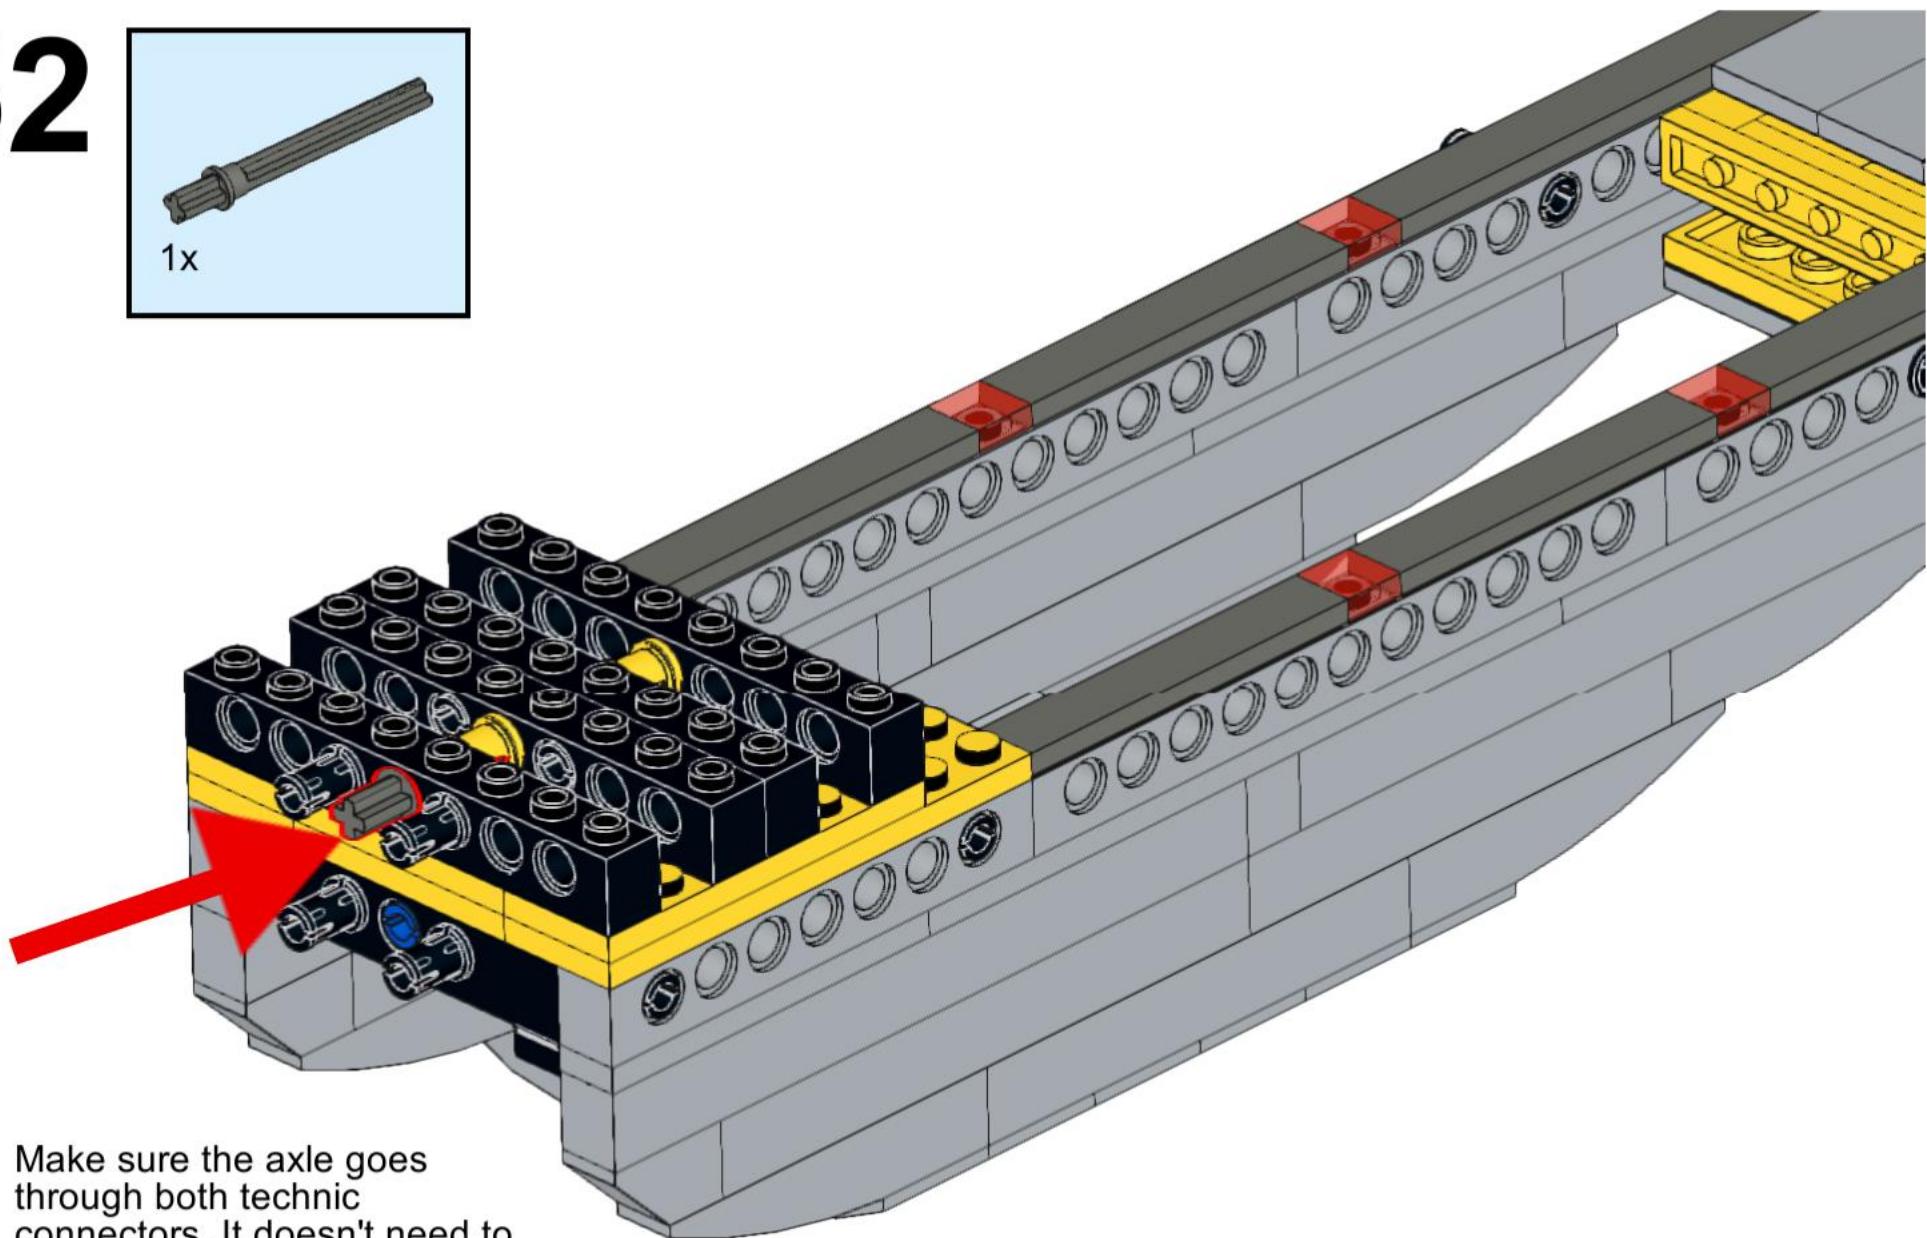

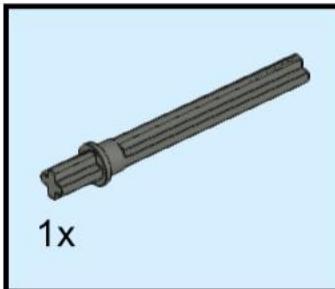

Technic axles will be inserted later,  
so these bricks are separate for  
now

51

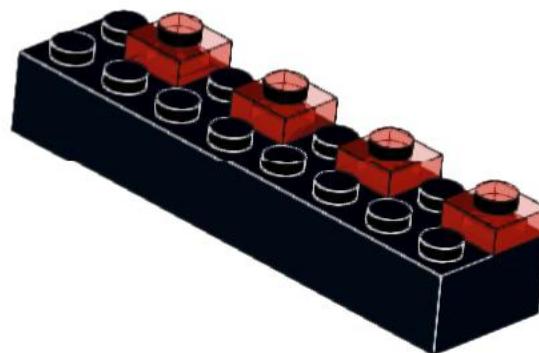

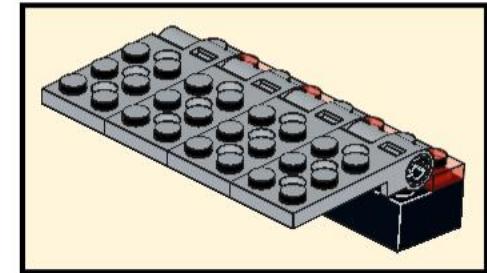

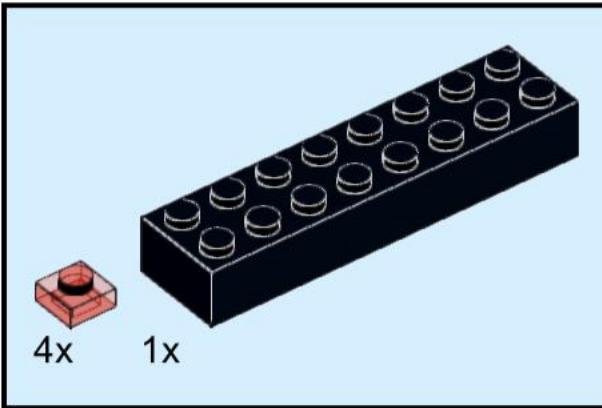

# 52

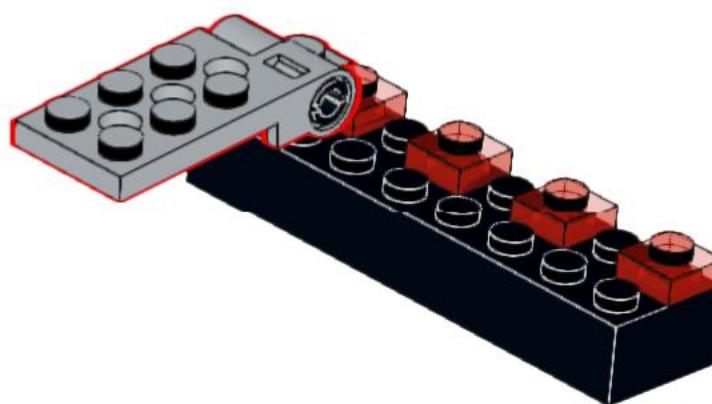

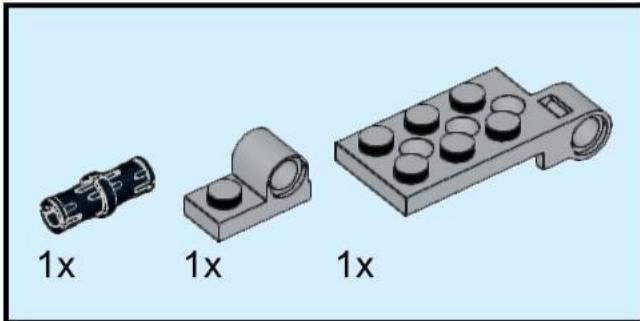

Make sure the axle goes through both technic connectors. It doesn't need to go through the last technic brick though.

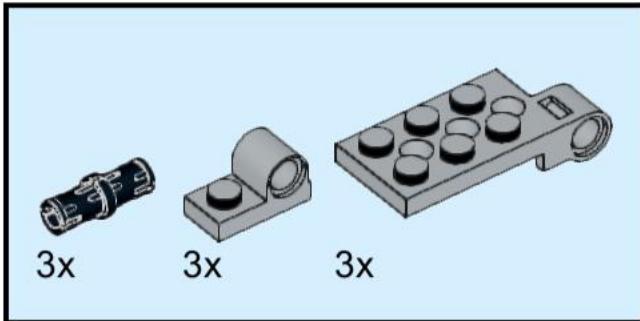

**53**

# 149

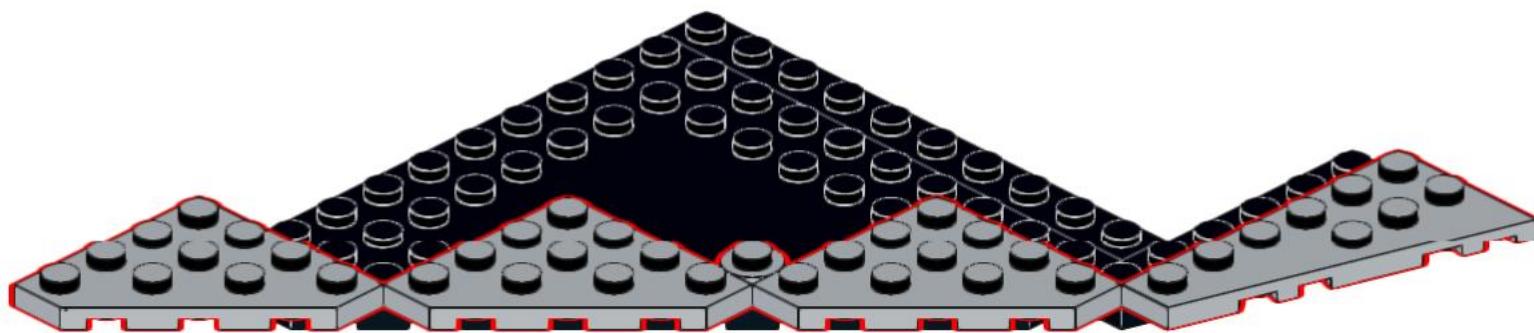

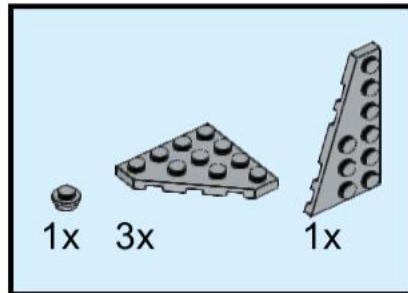

You can replace these axles with pins. However, you have to connect both wings before attaching them to the body if you do.
